DETAILED ACTION

1. It would be of great assistance to the Office if all incoming papers pertaining to a filed application carried the following items:

1. Application number (checked for accuracy, including series code and serial no.).
2. Group art unit number (copied from most recent Office communication).
3. Filing date.
4. Name of the examiner who prepared the most recent Office action.
5. Title of invention.
6. Confirmation number (See MPEP § 503).

Information Disclosure Statement

The examiner has considered the references listed in the PTO-1449.

Claim Objections

2. Claim 9 is objected to because of the following informalities: "claim 7" should be ---claim 8---. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. Claim 11 recites the limitation "the filter adjustment means" in line 1. There is insufficient antecedent basis for this limitation in the claim. (See claim 10)

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 8-11 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Eberhardt (5,930,288).

Eberhardt discloses a communication device comprising: a rake receiver having a plurality of fingers, the plurality of fingers adapted to receive multipath signals; and a lock detector coupled to the rake receiver and operative to adjust signal filtering based on the lock states of the fingers. The lock detector comprises a lock filter and a filter adjustment means operative to adjust the lock filter in response to the lock detector. (See figs. 1 and 4 col. 3, lines 23-33; col. 4, lines 20-28 and col.10; line 63- col.11, line 6)

Allowable Subject Matter

6. Claims 1-7 are allowed.
7. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fails to anticipate or render obvious the claimed wireless communication system having a rake receiver with multiple fingers the method comprising the steps of determining a lock state for a first finger of the multiple fingers; **determining a comparison of a received signal energy for the first finger to a threshold value if the first finger is out of lock; and adjusting a lock filter for processing signal received on the first finger in response to the comparison in the manner and complexity explicitly recited in claim 1.**

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Levin et al (6,130,923) is cited to show lock detector for multipath wireless receiver.
